Lab 2 Reflections

I found the hardest portion of the code was dealing with hashes. As I encountered errors it was quite difficult to find where the problems were located. Another challenge during this lab was grasping thread safety when debating whether to use synchronization or not and I would find myself staring at the screen for the right solution. Lastly, handling null values if not the default case might be null which would lead to errors when working with the tree structure. Beyond the lines of code, as a first-group lab, it wasn't so harsh. I was placed with amazing teammates who found themselves highly organized and moved on track with expected deadlines.
